Fondo Común: Decentralized Micro-Lending on Massa

Pool for All, Trust for None

Cosmas Ken

July 2025

The Problem

- Microfinance serves 200M+ users globally, but DeFi lending (e.g., Aave) demands high collateral, excluding gig workers and unbanked.
- Centralized platforms (e.g., Kiva) risk fees, censorship, and downtime
- No trustless, on-chain micro-loan solution with seamless UX.

Our Solution: Fondo Común

- A fully on-chain micro-loan pool on Massa Network.
- ► Users lend to a shared pool; borrowers access small loans (0.01-0.1 ETH).
- ▶ Autonomous Smart Contracts (ASC) handle trustless repayments.
- ▶ DeWeb frontend ensures decentralized, user-friendly access.

Why Fondo Común?

- ► **Target**: Gig workers, students, unbanked (1B+ global gig economy).
- ▶ **Demand**: \$200B microfinance + \$80B DeFi TVL.
- **Edge**: Low-barrier lending, no intermediaries, fully on-chain.
- **UX**: One-click lending/borrowing, real-time pool stats.

Key Features

- **Lend**: Deposit to pool with one click.
- Borrow: Request micro-loans, repaid via ASC (7 days).
- ▶ **DeWeb UI**: On-chain dashboard for pool balance, user status.
- ► Trustless: ASC automates repayments, no external bots.

How It Works

- ▶ Smart Contract: ASC manages deposits, loans, and repayments.
- DeWeb Frontend: HTML/CSS/JS, hosted on-chain, shows real-time stats.
- Prototype: Functional lend/borrow system, deployed on Massa testnet.
- ► **Code**: Solidity-like contract + DeWeb single-page app.

Why Massa?

- ▶ **ASC**: Trustless automation for repayments, no oracles.
- ▶ **DeWeb**: Fully on-chain frontend, no IPFS or centralized hosting.
- ▶ **Autonomy**: Runs forever without middlemen.
- **Scalability**: Ideal for low-cost, high-frequency micro-transactions.

MVP Demo

- ▶ **UI**: Clean dashboard with pool balance, user balance, loan status.
- ▶ **Flow**: Connect wallet, lend or borrow, view updates in real-time.
- ▶ Video: 2-min demo showing lend/borrow flow (GitHub submission).
- ▶ **Future**: Add interest rates, credit scores, multi-pool support.

Why We Win

- ► **Technical Excellence (25%)**: Robust ASC and DeWeb implementation.
- Innovation (20%): Novel micro-loan primitive for underserved users.
- ▶ **Usefulness** (20%): Solves real-world microfinance gaps.
- **UX** (20%): Simple, intuitive interface for non-crypto users.
- ▶ Autonomy (15%): Fully on-chain, no external dependencies.

Join Fondo Común

- ▶ **Vision**: Empower millions with trustless micro-lending.
- ▶ **Next Steps**: Test our MVP on Massa testnet.
